

Installation instructions

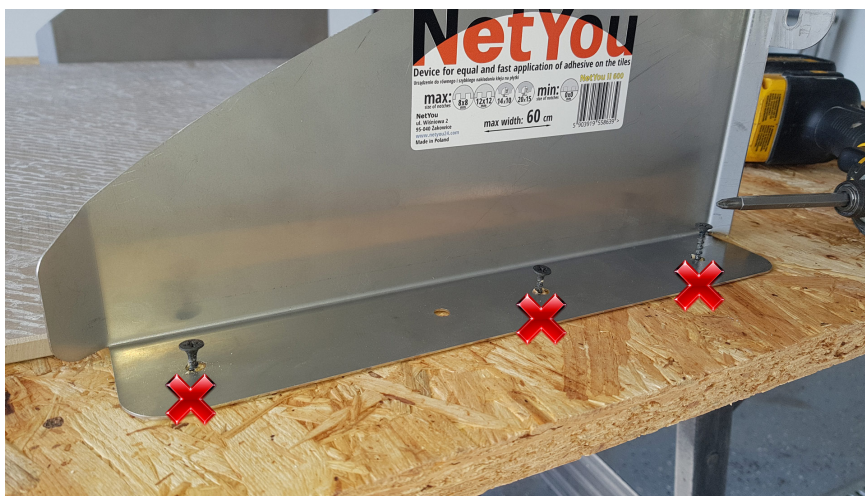

for a device for fast and equal application of adhesive on ceramic tiles

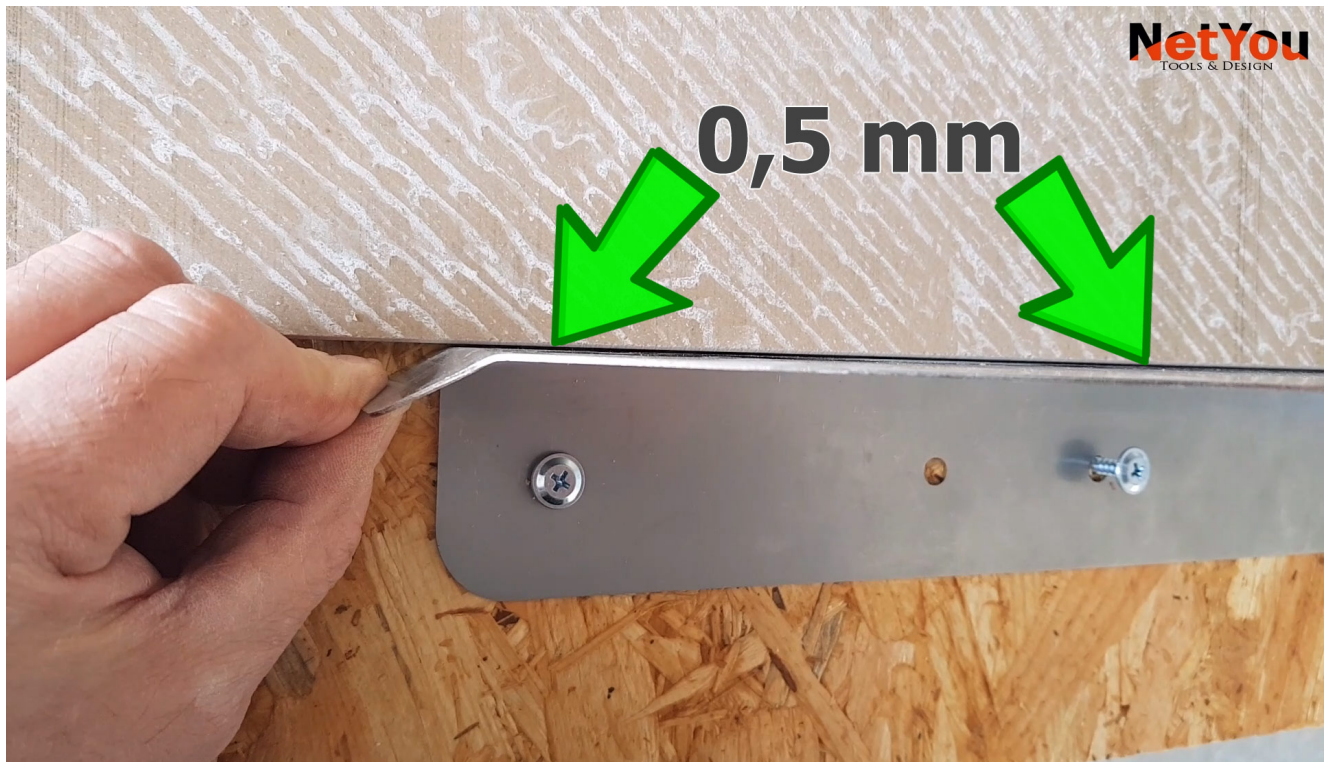

- ✓ adjustable notched trowel device - NetYou II 600 or 800

Step 1 Set the width to fit the device to the board

Step 2 Fix the sides of the device to the ground (leave a small gap on the side of the plate)

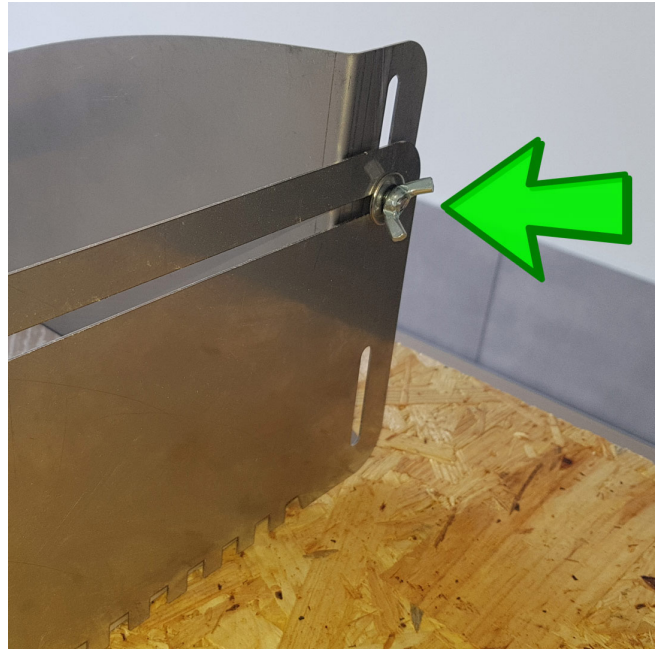

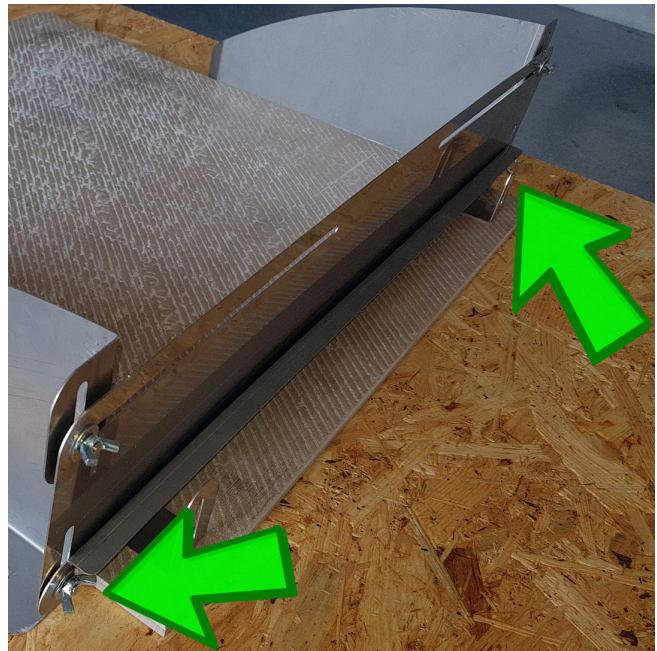

Step 3 Check if everything is mounted evenly

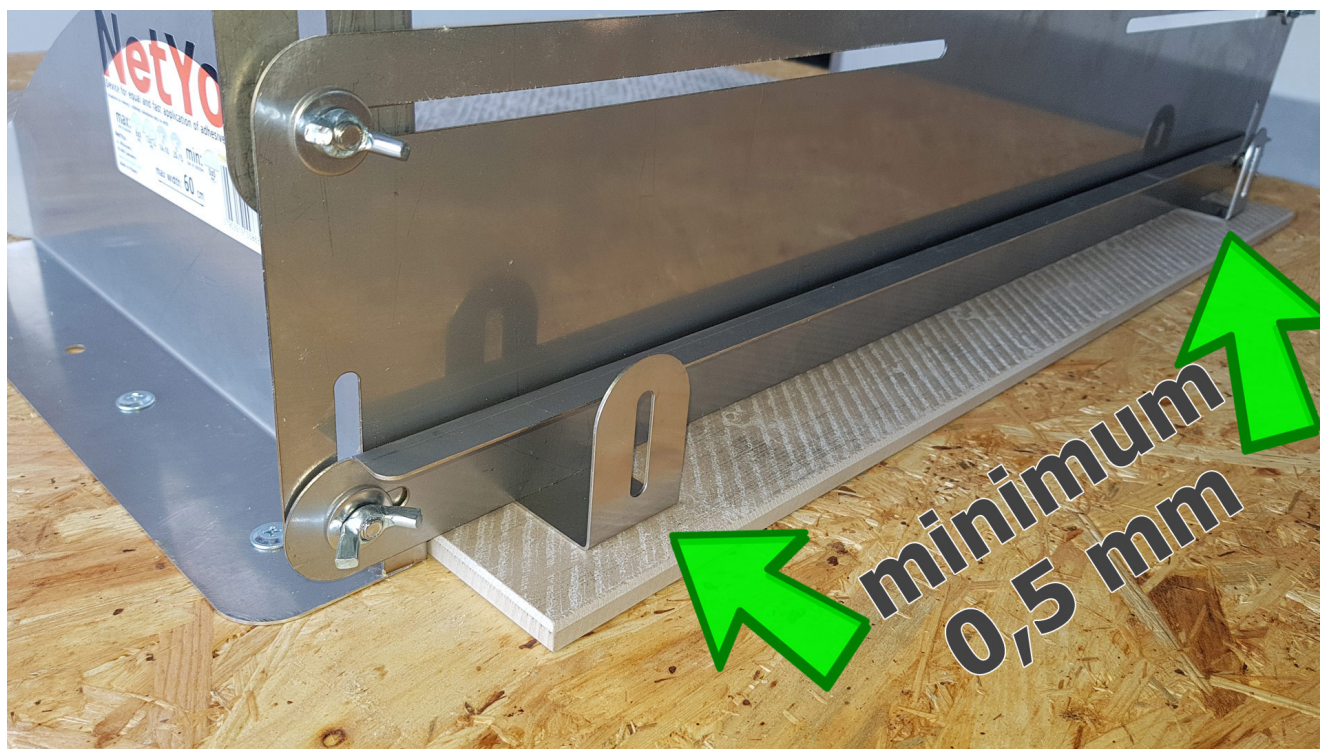

Step 4 Tighten the notched element

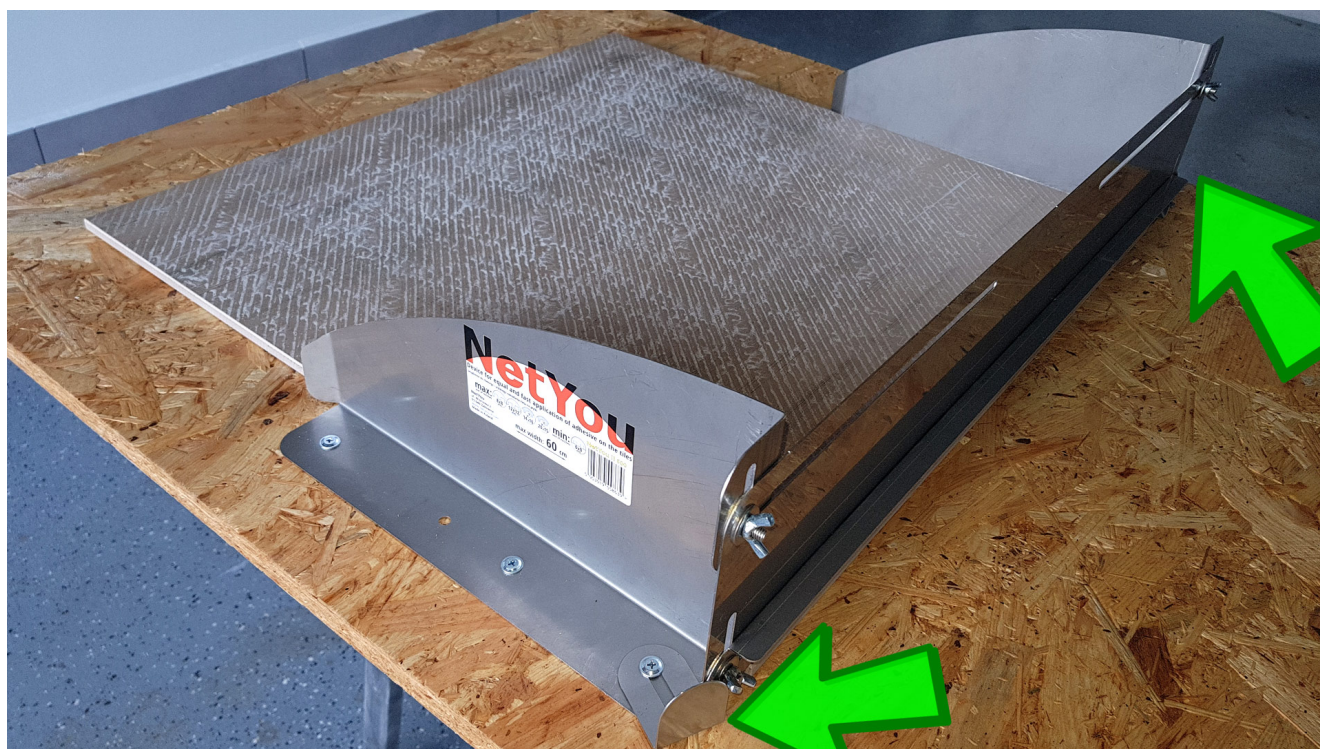

Step 5 Tighten the tooth cover

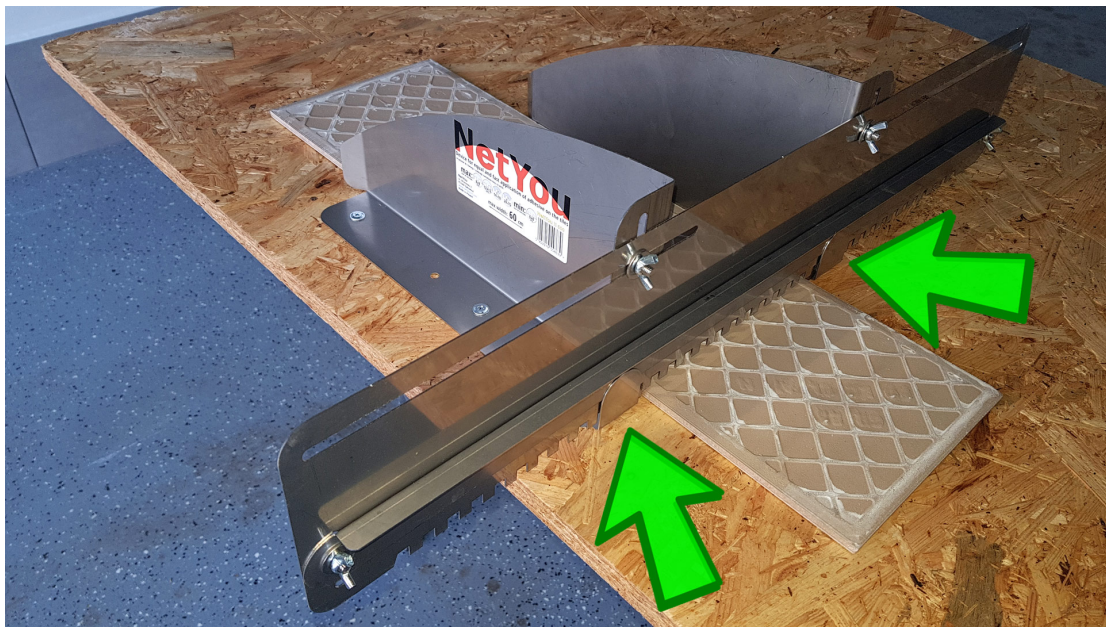

Step 6 Use two feeler gauges and set the clearance above the tile, then check if the entire tile moves freely and without resistance.

Step 7 Tighten both comb locks

Step 8

- Place the tile at the beginning of the device so that the glue covers it completely
- Place the tile adhesive between the arms of the device (directly on the tile)
- While working, check the amount of glue and the tile to see if they are dirty (dusty).
- Enjoy fast work
- Before a long break in work, clean the device of excess glue (wipe wet)
- After finishing work, wash the device (preferably before the glue dries) 😊
